RENAL FUNCTION TEST

INVESTIGATION	VALUE	UNIT	FLAG	REFERENCE INTERVAL
CREATININE	**66.0**	µmol/L		**Female: 53.0 – 120.0** **Male: 71.0 – 140.0**
UREA	**2.8**	mmol/L		**1.7 – 8.3**

POTASSIUM	**4.7**	mmol/L		**3.5 - 5.5**
CHLORIDE	**103.1**	mmol/L		**98.0 - 110.0**
eGFR (CKD-EPI)	**100**	ml/min/1.73m^2		**Normal Kidney Function: 90+** **Mildly reduced Kidney Function: 60 - 89** **Moderately reduced Kidney Function: 30 – 59** **Severely reduced Kidney Function: 15 - 29** **End stage Kidney failure:<15**

Estimated Glomerular Filtration Rate (GFR) was calculated using the CKD-EPI (2021) creatinine equation, which does not include a race variable. eGFR is an estimate and should be interpreted alongside clinical findings, urine albumin-to-creatinine ratio (uACR), and patient history. Values may be affected by extremes of muscle mass, malnutrition, amputations, or acute illness. A single eGFR result is insufficient for CKD staging; confirmation requires two measurements at least 90 days apart. For clinical decisions, physician correlation is advised.
